ECOLOGICAL SOFTWARE SOLUTIONS LLC

We are...
dedicated to improve data collection and analysis for ecological and environmental observations, including but not limited to those for researchers, biodiversity, conservation, monitoring, and protected area management. We strive to involve communities and stake holders on all levels.
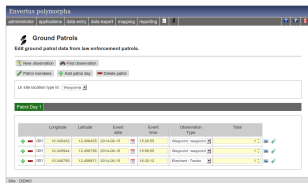

Our contribution is...
to teach to think and to enable the use of systems and meta-systems, to properly collect, manage and use data, and to receive actual up to date information for research analysis or management decision making.

Software

Join the thousands of users in over 50 countries that have downloaded our software. Software products are either free for unlimited use or for an evaluation trial period.

Envertus – the new generation of Research Data Collection, Analysis and Information Management Systems based upon over a decade of experience.

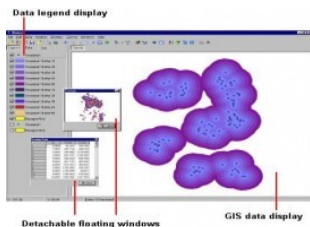

Data Collection and Analysis...
solutions we offer include

both open source and commercial products, retail and custom design services.

Data legend display

Detachable floating windows

GIS data display

From reporting and charting, to local, network or server mapping using a range of third party or our own GIS solutions and database systems and servers. We have built comprehensive projects for LAN and Internet based databases systems that service an organization, agency, or even an entire country. But we also do not consider any project too small to offer our skills and talents.

With over 60 years of combined ecological knowledge and programming experience from our members means we can deliver what you need.

Monitoring...
is a clear and unambiguous definition for collecting data and and a statement of reasons and objectives that such data will satisfy, with a precise regard to the final use of the data collected. This all while approaching the needs both of individuals and organizations. We specialize in monitoring solutions for any project and can implement solutions from the monitoring needs of a single user to the needs of thousands.

Needs Assessment...

is the a prior necessity of proper monitoring setup, and establishing a needs assessment is our specialty. A needs assessment is a systematic process to determine and solve needs of current conditions and guide them to desired conditions.

A proper needs assessment means more efficiency, progress, content relevancy and actions in place of missing links. The process to reach a wanted condition needs conceptual planning and the appropriate placing of milestones with all interested parties. Needs assessment is the most important preparation process and effective tool necessary to achieve long term sustainable management goals and results.

Training

We offer both on site and on-line training and workshops. In many cases, there is nothing like being there, so we offer training courses, seminars and learning modules at your site and at selected conferences.
